Yiming Zhong

Zhongym2026@163.com | +86 13650740007 | Shenzhen, China

EDUCATION

Southern University of Science and Technology (SUSTech) Shenzhen, China

*Bachelor of Engineering in **Intelligent Medical Engineering*** *Expected graduation date: 06/2026*

- **Cumulative GPA:** 3.79/4.0 | **Weighted Average Score:** 90.68/100
- **Second-class Scholarship** for Outstanding Student, 11/2023 & 11/2024
- **Outstanding Volunteer Award** (235.7 hours of volunteer service, Top 0.5%), 11/2023 & 11/2024
- **Coursework:** Machine Learning and its Medical Engineering Applications; Medical Image Processing; Computer Vision; Principles of Medical Imaging System; Biomedical Optics.

Nanyang Technological University (NTU) Singapore

Non-degree Exchange Program *08/2025 - 12/2025*

- **Coursework:** Control in Biosystem; Machine Learning and Optimization for Bioengineers.

PUBLICATION

[2] Ziyan Wu, **Yiming Zhong**, Chuchu Liao, Xiaoyan Song, Qiqiong Wang, Wenjin Wang. **A Pilot Clinical Study to Understand the Relationship between General Movements and Ultra-Short-Term HRV of Neonates.** IEEE-EMBS International Conference on Biomedical and Health Informatics (BHI), 2025.

RESEARCH EXPERIENCE

SUSTech Contactless Healthcare Lab | Camera-based Contactless Health Monitoring Shenzhen, China

Research Assistant, Advisor: Dr. Wenjin Wang

Project: Contactless Smart Infant Sleep Monitoring System *02/2025 - Present*

- Developed a multispectral physiological imaging system for precise, contactless monitoring of infant vital signs, in collaboration with a leading hospital in Wenzhou, aiming to enhance monitoring accuracy from consumer-grade to clinical-grade standards.
- Leveraged ECG and PPG signals to extract and validate infant motion metrics for preliminary sleep analysis.
- Deployed open-source human pose estimation and optical flow algorithms to compute key-point motion features, confirming feasibility of camera-based polysomnography (PSG) for infant sleep staging.
- Conducted camera-based PSG monitoring on 100 infants to establish normative sleep-stage benchmarks.
- Extracted limb movement coordination and intensity features from video data, applying SVM, Random Forest, Gru and Transformer for binary and multi-class sleep-stage classification.

Provincial Project: Multidimensional Video-based Contactless Infant Seizure Monitoring *04/2024 - Present*

- Developed a real-time monitoring and prediction algorithm for infant seizures in collaboration with a leading hospital in Guangzhou, aiming to establish a low-cost, contactless detection system to mitigate resource limitations and inconsistencies in seizure diagnosis quality.
- Preprocessed raw ECG signals to extract heart rate and calculate heart rate variability (HRV).
- Utilized remote photoplethysmography (rPPG) to extract heart rate and HRV from video data for non-invasive physiological monitoring.

- Applied optical flow technique to analyze global and skin-region motion in vEEG videos and deployed human pose estimation tool to detect infant keypoints and compute motion intensity.
- Analyzed limb movement intensity using cross-correlation and Pearson correlation coefficients to integrate motion and physiological signals.
- ***Innovation:*** Introduced a camera-based solution for NICU settings, enabling contactless monitoring of infant motion and physiological metrics with improved precision and efficiency.

NUS Digital Heart Lab(DHlab) | AI Powered Personalized Virtual Heart Model Singapore

Research Assistant, Advisor: Dr. Lei Li

Project: AI Powered Personalized Torso Reconstruction *08/2025 - Present*

- Applied a deep learning approach to automatically segment the torso region from subjects' cardiac magnetic resonance images, and further conducted multi-view fusion to integrate 2D contour sequences from different CMR perspectives, constructing a sparse 3D torso contour for each subject.
- Generated diverse body shape representations based on a Statistical Shape Model (SSM), and trained a Signed Distance Function (SDF) neural network. This network incorporates a PointNet module to extract torso morphological features and uses a MLP to implicitly approximate human body geometry.
- For each individual subject, computed an optimal feature vector within the learned feature space and utilized the trained MLP to achieve high-accuracy personalized 3D torso reconstruction.
- ***Innovation:*** Introduced implicit neural representation (SDF) into human torso modeling, enabling an end-to-end, personalized 3D reconstruction based on sparse data, with significant improvements in accuracy and adaptability over traditional methods.

SELECTED PROJECT

SSVEP-based BCI Robotic Car Control System with MATLAB Shenzhen, China

Team Member, Advisor: Dr. Peng Cheng *11/2024 - 01/2025*

- Collected EEG signals from occipital regions using gold cup electrodes and a Cyton board (250 Hz).
- Applied Butterworth filters for noise reduction and extracted key EEG components (4–35 Hz).
- Implemented and compared CCA and FFT methods to decode SSVEP frequencies with high accuracy.
- Transmitted motion commands via Bluetooth to demonstrate reliable and precise human-machine interaction.

VOLUNTEER & LEADERSHIP

Community Service Department, Shuren College Shenzhen, China

Leader *09/2023 – 09/2024*

- Coordinated 580 volunteers across 11 community programs, collectively contributing 2,850 service hours.
- Organized the 2023 Summer Teaching Program in Lianping county, crafting lesson plans and leading hands-on activities that blended science, sports, and life skills to inspire and empower students.

"Heart-to-Heart" Volunteer Teaching Program in Longchuan County Longchuan, China

Organizer *07/2024*

- Designed a program benefiting 102 primary school students, overseeing planning, implementation, and evaluation.
- Drafted activity proposals, developed contingency plans, recruited and trained volunteers, and scheduled logistics.
- Managed daily operations, including logistics coordination, class assignments, volunteer briefings, and student feedback collection.
- Prepared financial documents, drafted research reports, and delivered program outcome presentations.

SKILLS

- **Programming Language:** Matlab, Python, C/C++
- **Language:** Mandarin (native), English (IELTS 7.5)
